Abstract (en)

[origin: WO0142587A1] The invention relates to a wall-mounted (2) support (1) for the roof tiles (3) of a roof structure which runs substantially at right angles to the wall (2). The invention aims to achieve an optimum introduction of the forces originating from the roof construction into the wall (2) and to enable the roof structure to incline in relation to the wall (2). To this end, the support (1) is configured as a bearing element (8), rigidly fixed to the wall (2), in which the roof tile (3) is secured by a clamping element (6) that is mounted in a pivotable manner.
