Abstract (en)
[origin: WO0056069A1] A method and apparatus of modifying video data according to a first format (e.g., interlaced scanned format) in a system includes retrieving one or more indications of movement associated with the video data (502). The video data is converted from the first format to a second, different format (e.g., progressive scanned format) (510) based on the one or more indications of movement. The video data may be digitally encoded according to a Motion Picture Experts Group (MPEG) standard, such as MPEG-2.
