Abstract (en)

[origin: WO0056098A1] A system and method for gathering data from wireless communication networks, the wireless communication network including a plurality of cell sites, mobile subscriber units, and a mobile telephone switching office. The data gathering system comprises a plurality of data gathering nodes and a control center. Each data gathering node comprises multiple receivers, with each receiver gathering data from a different wireless communication network. Stored data at the control center is processed to generate marketing information on each wireless communication network.
