Abstract (en)

[origin: EP1161929A2] A lower part of an operating table has a moving mechanism framework (1) with moving rollers (2). This framework has a table support (3) fitted with a height-adjustable cover plate (4), onto which an operating table upper part can be fitted. Several hydraulic consumers provide adjustment. A reversing lever (22) selects the position of a sliding valve. A connector rod (24) links the reversing lever to a piston rod in the sliding valve.
