Abstract (en)

[origin: WO0054595A1] Disclosed are methods for the use of recombinant adeno-associated virus compositions. In particular, the use of catalase- or superoxide dismutase-expressing rAAV constructs in compositions for delivery to the optic nerve is disclosed. Also disclosed are methods for the treatment and amelioration of symptoms of demyelinating disorders of an animal, such as multiple sclerosis, allergic encephalomyelitis and optic neuritis.
