Abstract (en)
[origin: DE10000700A1] The invention relates to an angle grinder, in particular, whose housing is more economically produced in that it is comprised of a motor housing (1) and of a gearbox housing (2), whereby a recess (20) is provided on the end of the gearbox housing (2) that can be connected to the motor housing (1), and first and second ribs (100; 110) of the motor housing (1) can be brought into contact with said recess. This results in simplifying the method for mounting the gearbox housing (2) onto the motor housing (1) by virtue of the fact that fewer mounting steps are necessary.
