Abstract (en)
[origin: WO0050259A1] The present invention refers to a vehicle seat with a cushion and a back support, preferably intended for a motor vehicle with a roof to the body. More specifically, it relates to a vehicle seat including a belt (12) for anchoring a person to the vehicle seat where the free ends of the said belt have attachment points (14, 16, 18, 20) arranged at the vehicle seat (2; 60) and comprising a connection means (22, 22') that at a lower end (24; 24') is arranged at the back support (6; 61) and that at an upper end (26; 26') is arranged at a device (28; 28') in the roof (10) of the body, whereby the said connection means (22, 22') has a first attachment point (30; 42) arranged at the said device (28; 28') in the roof of the body that in a normal position is fixed during loadings up to a predetermined value, and which first attachment point (30; 42), during loadings that exceed the said predetermined value, is arranged to be displaced backwards in the roof of the body in relation to the direction of movement of the vehicle to a second attachment point (32; 44). The present invention also includes a method and a use thereof.
