Abstract (en)  
[origin: EP1038782A1] The present invention relates to a process for producing a solid object (4) comprising a first step, the first step consisting in applying a first substance onto a selected surface area by use of first application means (5), the selected surface area and the solid object being both in motion relative to the first application means and the selected surface area being solely in contact with the first substance during the first step. The process also comprises a second step consists in applying a second substance onto the selected surface area by use of second application means after completion of the first step, the selected surface area and the solid object being both in motion relative to the second application means and the selected surface area being solely in contact with the second substance during the second step, the process taking place at a continuous line speed. <IMAGE>
