Abstract (en)
[origin: WO0055445A1] The invention relates to a method of producing a wood structural member (1), whereby several segments (2) of wood material are stacked on top of each other and are glued to each other. According to the invention the wood material segments (2) are stacked on top of each other and are glued to each other in at least two substantially parallel stacks (3a, 3b; 3a', 3b') and a steel plate (4) is provided between the stacks or between at least two of the stacks, which is glued to each of the stacks being adjacent thereto, for forming a composite integral member.
