Abstract (en)

[origin: WO0153772A1] The invention concerns the technical sector of containers for heavy calibre ammunitions, in particular ammunitions for field artillery. The inventive container (1) consists of a body (2) comprising at least a cell (9) for receiving an ammunition element, said body having also two side surfaces (5, 6) and a lower surface (7) and an upper surface (8) with matching shapes (28) forming means for positioning the container relative to another container stacked thereon, said container also comprising at least securing means (13) for linking it with another container stacked thereon. The invention is characterised in that the matching shapes (28) ensuring positioning are provided at each angle of the lower (7) and upper (8) surfaces of the container.
