Abstract (en)

[origin: WO0049414A1] The invention concerns identification of illnesses, especially cancer in humans. The invention relates to the behavior of cell membranes of immune system cells and the behavior of blood as general neurotransmitter. Based on the determined ion concentrations of sodium (Na+), potassium (K+) and calcium (Ca+) in blood obtained by standard process of taking blood the invention enables to determine a composition to be used as blood stimulant as therapy of the identified disease.
