Abstract (en)

[origin: DE19911980C1] A method of presenting or displaying textural tags for hyper-text mark-up language (HTML) applications, involves initially reading (101) in the first data and ascertaining (102) the specified tags in the first data. The first data is then displayed (103) on the second data, via the tags, depending on a specified parameter. The second data specifically represent the empty set and the parameter characterises an underlying hardware item. More specifically, the tags are HTML tags.
