Abstract (en)  
[origin: US2001051565A1] An exercise machine comprises an organ able to be moved cyclically to exchange power with a user, interfacing means between the movable organ and the user to allow an exercise motion and means for supporting the user for the exercise; the machine comprises at least two portions connected to each other and mutually movable between two stable configurations, respectively: non operative in correspondence with which the two portions define a furnishing structure to cover the movable organ and the interfacing means and operative, for exercising, in correspondence with which at least a portion makes active the movable organ and the interfacing means.
