Abstract (en)
[origin: EP1163937A2] The raised plate (1) is in at least two parts (1',1) forming an opening (9) between them for fastenings or holders holding the binding and fitting into the snowboard (2). The two plate parts are adjustable in relation to each other for setting the active width of the plate at right angles to a middle plane intersecting an upper and lower side of the plate. On one side (4) of the plate the two plate parts form at least one wing (6) resting against the snowboard.
