Abstract (en)

[origin: EP1164089A1] The infusion bag in the top section(6) has two laterally spaced perforations(8,9) lying to the left and right of the bag's longitudinal axis and which pass through a folded-in corner and middle portion of the top section. The thread(3) to form a loop(3a) is guided by one end through one perforation and by its other end through the second perforation. The loop is laid over the top edge(10) of the infusion bag and both ends(3b,3c) of the thread are guided from below through the loop to form a doubly secured knot. An Independent claim is included for a procedure for the sealing of an infusion bag.
