Abstract (en)

[origin: EP1164102A1] The machine has a magazine (35) for support or suspension holders (5) for the samples and magazines (14,17) for the samples themselves. A handler picks up the holders and places them flat on a movable plate (10) and further handlers position the samples on the plate in a stack. A folder folds the holders around the stacked samples and a stapler (44) staples them together.
