Abstract (en)

[origin: WO9402107A2] A method and medicament for the inhibition of neutrophil elastase and cathepsin G in mammals comprising administering a treatment effective amount of 2-O-desulfated heparin to a mammal in need thereof. The medicament preferably is administered by aerosolization or by intravenous (IV) injection. In specific embodiments of the invention, the ratio of 2-O-desulfated heparin to elastase is greater than about 0.2 and less than about 2.0, or the ratio of 2-O-desulfated heparin to cathepsin G is greater than about 0.4 and less than about 2.0. Preferably, the 2-O-desulfated heparin medicament includes a physiologically acceptable carrier which may be selected from the group consisting of physiologically buffered saline, normal saline, and distilled water.
