Abstract (en)

[origin: DE10029391C1] Support element has profile rail (1) to fit along at least part of the edge of the window element, which is held between the panes (3). The profile rail has elastic projecting tongues (11-14) that can be pressed against the frame (2). A bar projects freely from the other side of the profile rail in the plane of the window element and fits in a groove (16) in the frame, so that the window element is held and centered vertically in the frame. Elastic support tongues (17,18) run parallel to the plane of the window element at the edge of the profile rail.
