Abstract (en)

The object of this invention is an originally conceived back-blast weapon training cartridge consisting of a gas generator with an ignition device, a gas-operated striker device and a conventional bullet cartridge. This back-blast weapon training cartridge provides improvements and original elements over known training devices, particularly because it makes up a single member, to be inserted in the weapon in a single step, thereby reducing the risk of incidents in the use of training weapons of this kind, and contemporaneously expediting the storage and logistics of that ammunition. <IMAGE>
