Abstract (en)

A real-time network personality analysis system which operates when a first user and a second user are simultaneously connected through a network, and comprises a storage device, a personality analysis module and an output device. The storage device stores basic data of the second user, the personality analysis module performs a personality analysis on the second user, and the output device provides the personality analysis of the second user to the first user for his reference when they are connected through a network. The invention also discloses a corresponding real-time network personality analysis method. <IMAGE>
