Abstract (en)

[origin: WO0053455A1] Device for controlling direction indication lamps (1, 2, 3, 4) of a vehicle in mutually different operative conditions. The device cooperates with a blinker circuit (6) and direction selection switch (S1) already present in the vehicle. The device comprises a detector (5; 21) which detects the turning on of the blinker circuit (6). The direction indication signal function of the direction indication lamps has priority over the other functions of the direction indication lamps.
