Abstract (en)

[origin: WO0058171A1] A cover, and an assembly of a holder and a cover, the cover comprising a closing wall having a downward edge which lies so closely against a holder flange extending perpendicularly to the casing wall of the holder, or is so screened by a wall portion connected with the holder flange and extending substantially parallel to the casing wall, that engagement of this downward edge is not possible, whilst at an engagement position an engagement lip is connected with the downward edge of the closing wall, which engagement lip extends from the downward edge, so as to be engageable.
