Abstract (en)
[origin: US7150374B1] The invention relates to a device for storing and transporting unit loads, especially articles whose dimensions are substantially larger in at least one or two directions perpendicular to each other than in the remaining third direction in space. Said articles are substantially accommodated in U-shaped pouches (4, 5) that consist of flexible sheet material and that are mounted in a rack or a frame. Said pouches (4, 5) are suspended in one or more points in the vicinity of their upper edge and are fixed at least in one additional point in the area of their lower edge or below said lower edge. The inventive device is characterized by a substantially improved ease of loading. The individual articles are securely held in the pouches (4, 5).
