Abstract (en)
[origin: FR2784088A1] The invention concerns a device for handling sheet metal coils from a storage pallet to a reel and inversely without manual handling, in all safety for the operator and the material, in a short time, using a single and standard apparatus such as a forklift truck. Said handling device (10) comprises at least a member (20) for gripping the coil, a frame (30) bearing said gripping member by means of a first pivoting pin (21) and mounted on said lift truck (1) table (5) by means of a second pivot pin (31) and control means (40) coupled with said frame and designed to move it between an inoperative position wherein the gripping member is lifted inside said lift truck mast (4) and an operative position wherein said member is lowered between said truck forks (6). The invention is useful for loading and unloading parts, in particular sheet metal coils.
