Abstract (en)
[origin: WO0157340A1] The invention relates to a protective concrete panel with integrated under-cut naps that has an increased resistance to the hydrostatic pressure of ground water. The naps or pairs of wing elements (2) of the synthetic panel (1) are provided with expanded wing elements (3) that can be further expanded in their upper section (3.1). The wing elements (3) are interlinked via a supporting web (4) the height of which amounts to at least 70 % of that of a pair of wing elements. The pairs of wing elements (2) are fastened to the base panel (5) of the napped panel (1) by means of a base that widens into an arched shape.
