Abstract (en)

[origin: DE10002797A1] The invention relates to a template device for facilitating masonry work, comprising a vertically disposed beam (19), on which an arm (10) extending horizontally can be displaced and fixed in vertical direction. One or several templates (14) extending horizontally are disposed on said arm and can be pivoted in the horizontal plane. The invention also relates to a method for building walls using said template device.
