Abstract (en)

[origin: EP1043491A1] The method of power transmission from a Stirling engine has a drive piston (6) in a cylinder. The piston rod (6A) has a sector (AP) with a ratio to that of the piston which produces a total transmission to an output (11). A pneumatic resonator (18) is connected to the hot (Ve) and cold (Vc) chambers and adjusted so that the pressure wave is de-phased with respect to the transfer piston.
