Abstract (en)
[origin: WO0157390A1] The invention relates to a fuel injection valve (1), especially to a fuel injection valve (1) for fuel injection systems of internal combustion engines. Said fuel injection valve comprises a first magnet coil (2) interacting with an armature (3), a second magnet coil (4) interacting with the armature (3), and a valve needle (13) that is non-positively linked with the armature (3) and that actuates a valve closing body. The first magnet coil (2) impinges the armature (3) in the closing direction and the second magnet coil (4) in the opening direction.
