Abstract (en)

[origin: DE19915222A1] The method involves real participants (11) in a training area firing shells at targets (12) in the training area and receiving indications of impact results with targets within the effective area of hypothetical simulated shell strikes. The targets and participants are exclusively in radio communication (15) with a central station (14) and all data relevant to the shell simulation are exchanged via the central station.
