Abstract (en)

[origin: WO0060358A1] The following description refers to a method and a diagnostic kit for the identification of atherogenic apo(a) isoforms. The method consists in an electrophoretic run of samples to be tested and of a mixture of standards, the transfer (by blotting) of migrated proteins onto an appropriate membrane, and the immunologic identification of apo(a)isoforms. The presence of atherogenic apo(a) isoforms can be easily identified on the basis of their rate of migration (MW 640 kilodalton (kD) max.).
