Abstract (en)

[origin: WO0062377A1] According to the invention cable ducts (3, 4) are embodied in an apparatus (1, 2) in such a way that a form-coded flat cable (7) presenting a coding lug (11) can be introduced into said apparatus in different positions. The cable duct (3) has mirror-symmetrical lateral walls (9) which present a step (10) adjusted to the coding lug (11). The cable duct (4) is formed by insertion of a sliding element (13) into a duct (12). A lateral surface of the sliding element (13) presents a contour in which a step (16) is configured which the flat cable (7) contacts in a form fit by way of its coding lug (11).
