Abstract (en)
[origin: EP1166969A2] The tool has a turning switch for selection of various operating modes (2) via a manual turning movement applied to an actuator part (3). The part is elastically connected to a switch part (6), and to an eccentric actuating bolt (4). The bolt comes into deforming engagement with an associated projecting spring (5), which is connected non-turnable to the actuating part. For self-locking of the actuator part, a holder element (7) projects into a housing (8) of the tool.
