Abstract (en)

A process for making sheets (10) of a material which can be folded to obtain a wrapper, in particular for a pasty product, such as processed or melted cheese or a similar product. Each sheet (10) has a peripheral profile (15) with a transversal front edge (15a) and a transversal back edge (15b) opposite the transversal front edge (15a), and opposing first and second lateral edges (15c, 15d). The sheets (10) are obtained by cutting a continuous web (11) of the foldable material, the cutting being carried out with the web (11) moving with continuous feed. <IMAGE>
