Abstract (en)  
A writing equipment grip (10) which can give an appropriate cushion effect and improve durability. A plurality of groups (16), for example, three groups including a plurality of strips (14) projecting radially which can be bent by a clamping force are provided apart from each other around the circumference of a grip body on the outer surface (12A) of the grip body. The height of each strip is set so that as viewed along a cross section parallel to each strip in each group, the strip does not project radially beyond an extension of the profile of that outer surface of the grip body where no strips are formed. <IMAGE>
