Abstract (en)  
[origin: EP1167216A1] A fitment is described for use with a container such as a paperboard carton, having an operable section such as a removable disc surrounded by a pre-scored track. The fitment comprises a housing (2) secured to the container surrounding the removable disc (15). A tab (9) with a panel (10) is attached to the disc (15), and pivots with respect to the housing by means of lugs (13). To open the carton, the user grips a handle (11) pivoting the panel (10) to sever the pre-scored track (14). Further movement of the handle (11) fractures the lugs (13) allowing the complete removal of the disc (15) from the carton. The panel (10) is preferably smaller than the disc, leaving a free region (16) which can flex and/or form hinge lines during operation of the tab. <IMAGE>
