Abstract (en)
The invention relates to a magazine for tubes (3) of a textile machine comprising a plurality of operating units situated next to each other and fitted with winding devices, an attending device (5) adapted at least to replace wound bobbins by empty tubes (3), and a conveyer (2) for tubes (3) situated along the machine length in parallel with the row of the winding devices, and a device for moving the tubes (3) from their magazine to the conveyer (2) related to one end of the conveyer. The magazine (2) for tubes (3) consists of at least one additional tube conveyer (6) whose front end has related thereto a device for bringing the tubes (3) from the additional tube conveyer (6) to the main tube conveyer (2) for tubes (3). <IMAGE>
