Abstract (en)
[origin: EP1167641A2] The holder, for a hand-held shower head, has a one-piece fork (1) with a ring opening (10) at the ends of each fork leg, to hold a hub (11) of spokes. A toothed disk (2) in the opening acts as a plate spring against the hub, with projections to give a keyed grip on the spokes. A clamping bolt (3) is through the hub, with a flange at the outer end side of the disk and with the head (4) of the holder, so that each of the two disks are pressed against the ratchet teeth of the holder head by a single bolt. The bolt keeps the holder head on an axis (13) through the hubs.
