Abstract (en)

A locking system (1) with electromagnetic deactivation of a handle (2) for doors of trucks, trailers or the like, comprising a fixed box-like element whereto the end of a handle (2) is articulated about an axis which is parallel and proximate to the door; the handle (2) is associated with a latch-type closure lug (8) which is mounted so that it can slide parallel to the door, and the locking system (1) comprises at least one plate (12a,12b) which is rigidly coupled to the handle (2), passes through a slot of the bottom of the box-like element and has an end crossed by a notch (14) for the passage of a sliding locking member (15a,15b) connected to an electromagnet (20) which is mounted behind the bottom of the box-like element and is provided with actuation means which are adapted to be activated by a remote control.
