Abstract (en)
[origin: WO0054659A1] This invention is a traumatic arthro-ectomy device (10) having a shear body (300) contained within a substantially form fitting housing (200), the housing (200) having apertures (204) through which occlusive tissue may protrude into the interior of the housing (204), and be engaged by a rotating shearing body (300) within. The shearing body (300) has teeth (304), flutes which are helical in design, and have a cutting line.
