Abstract (en)
[origin: WO0041714A1] The present invention relates to methods for consistently designating appropriate treatment (13A) controls for patients, particularly protocols involving wounds or wound prevention (16). Specifically, the invention relates to methods wherein a patient condition such as a wound is assessed against defined scales for classifying and grading (13i), which assessment is used in a visual decision tree device to identify one or more components of a treatment protocol (figure 4).
