Abstract (en)
[origin: WO0059578A1] The invention relates to a spreading device (1) for widening openings. The inventive device (1) is especially used for salvaging trapped persons and comprises an actuating device (3) which can be impinged upon with a pressure medium (4) and with swivel arms (16, 17) which are coupled to the actuating device (3) in order to perform a synchronous reverse pivoting movement. The swivel arms (16, 17) are configured as cutting and/or spreading elements for instance, are pivotably mounted in a housing (15) that accommodates the actuating device (3) and are in a driving connection with a pressure tappet arrangement (48) that can be displaced in the direction of a longitudinal middle axis (53) which extends approximately parallel in relation to a swivelling plane (20) of the swivel arms (16, 17).
