Abstract (en)
[origin: WO0056831A1] The invention relates to a method for reinforcing or sealing the walls of hollow bodies. According to said method the area of a hollow body which is to be reinforced or sealed is at least partly enveloped by at least one woven fabric which is permeable to a curing outer adhesive or by a non-woven of this type, after which the woven fabric or non-woven is impregnated with an adhesive. The invention also relates to a repair kit which can be used to reinforce or seal the walls of hollow bodies. Said kit comprises at least one woven fabric or non-woven permeable to a curing adhesive with which a hollow body can be at least partly enveloped, as well as at least one curing adhesive to which the woven fabric or non-woven is permeable.
