Abstract (en)
[origin: GB2348884A] Visible light reflecting particles comprise one or more detergent ingredients and comprising a light reflecting component, which provides that the particle has a specular visible light reflection which is greater in intensity than the specular visible light reflection of the ingredients per se. Preferably, the reflection is greater than the reflection of sodium citrate dihydrate. The reflecting particle preferably comprises the light reflecting component evenly applied on its surface. Also provided are detergent tablets or bars comprising the reflecting light reflecting particle containing the light reflecting component. The particle is in particular for incorporation in laundry or dish washing compositions, fabric conditioning compositions or hard-surface cleaning compositions.
