Abstract (en)

[origin: DE10014994A1] Data is transferred via a data bus (108) in a vehicle connecting components like vehicle systems (111-113), sensors (114), actuators (115) and other vehicle components (116). Acting as a central storage medium (101) for the components linked to the data bus, a memory is also connected to the data bus. Data is stored permanently in the storage medium for the whole time the vehicle is in use.
