Abstract (en)
[origin: WO0160026A1] The invention concerns a method for registering a user on the directory and/or locating a cybernaut on an Internet-type network (RI), by interrogating a directory server (SAi), so as to determine an IP address associated with said cybernaut. The method consists in using a smart card (2a) storing applications (AI) each associated with a registering and/or locating protocol (PL). Subscriber profiles can be stored in the smart card (2a). Several different protocols can be stored, transforming the smart card (2a) into a multiple-directory database. The card (2a) is provided with WEB client/server and CGI functional capabilities, so as to be able to initiate transmissions in accordance with Internet protocols between directory server (SAi) and the smart card (2a), and activate the applications (AI) stored therein, for the process of registering and/or locating protocols (PL). The invention also concerns the related card.
