Abstract (en)  
Shearing bar apparatus able to be assembled on an agricultural harvesting machine (11), comprising at least a first operating part (16) and at least a second operating part (17), both provided with a substantially horizontal shearing bar (13, 14) and able to assume respective working positions wherein they are aligned on a same horizontal plane and wherein at least one of them protrudes, at least partly, from one side with respect to the agricultural machine (11). At least the second operating part (17) is able to be translated by a kinematism which keeps it substantially horizontal, between the working position and an inactive position, wherein it is superimposed on top of the first operating part (16). <IMAGE>
