Abstract (en)

Device for conveying a strand of tobacco comprises a channel (1) for guiding the strand. The surface of the channel facing the strand is made at least partially of ceramic. Preferred Features: Only the stationary surfaces are made of ceramic. The stationary surfaces are the surfaces of ceramic plates (44, 46) used to at least partially cover the channel. The ceramic plates cover the side walls (38, 40) of the channel in a form-locking manner and are stuck onto the side walls. The side walls are coated with ceramic in a layer thickness of 0.05-0.5 mm by spraying or melting.
