Abstract (en)
[origin: EP1169947A1] The office chair has a seat support made up of two sections (12, 13) linked by a central pivot (20). A back rest support (6) is attached to the rear section (13). The relative positions of the back rest and seat (5) can be adjusted using a gas spring (27). The top end of the seat pedestal (3) fits into a recess connected to the front section (12) of the seat support by a second pivot (49) which is parallel to the first. This pivot can be locked by a toothed strip (49a) which cooperates with toothed jaws on the seat support.
