Abstract (en)
A method for forming an image by thermal transfer: comprising forming a multi-color image using two chromatic color thermal transfer ink ribbons A and B, the thermal transfer ink ribbons A and B having respective chromatic colors which satisfy the following relations: $\langle DF \rangle Y_A + Y_B \geq 1.0$ $\langle DF \rangle \langle DF \rangle M_A + M_B \geq 1.0$ $\langle DF \rangle \langle DF \rangle C_A + C_B \geq 1.0$ $\langle DF \rangle$ wherein Y_A , M_A , and C_A are defined respectively as values obtained by color separation of the optical reflection density of the thermal transfer ink ribbon A into Y, M, and C components, and Y_B , M_B , and C_B are defined respectively as values obtained by color separation of the optical reflection density of the thermal transfer ink ribbon B into Y, M, and C components.
