Abstract (en)

A station for feeding products to containers, in particular tubes, includes product dispensing means (5) for paste products, which can be removably fastened to the structure (100) of a tube filling and closing machine (M) by quick locking means (10). In this position, the product dispensing means (5) are operated by actuators (55) of the machine (M), so as to fill the tubes (3) with the paste product. According to the method, in order to be cleaned and sterilized, the product dispensing means (5) are removed, during a machine stop, and taken to a suitable place, far from the machine (M). The operation of the machine (M) can be resumed immediately by installing cleaned and sterilized product dispensing means (5). <IMAGE>
